Details and examples for journal authors

Ensure you have read the general rules for referencing in the author instructions. Check the author instructions for your selected journal to confirm the reference style required. Whichever reference style is used all listed references must be cited in the text and vice versa.

In-text citations

Cite references in the main text by author and date (Smith 2024). When citing two or more references together, list them in chronological order separated by semi-colons (Bloggs 2017; Doe 2024). Multiple references from the same year should be cited alphabetically (Doe 2024; Smith 2024). Link the names of two co-authors using 'and'; for three or more, use '*et al.*' after the first author's name (Doe and Smith 2023; Smith *et al.* 2024). To cite a direct quote, include the page number in text (Smith *et al.* 2024, p. 6).

Reference list

List all cited references at the end of the paper, with the names of authors arranged in alphabetical (by first author surname) and chronological (earliest paper first) order. Use full titles for all references and do not abbreviate journal names. Include all author names in the reference list where possible. As a minimum, include three author names followed by *et al.* Do not use ellipses (...) to indicate missing authors. If several references have the same author and year, use italicised letter extensions to differentiate (e.g. 2023*a*, 2023*b*).
